PROJECT DETAILS:

Project	**SF-NS Connector**
Role	Developer
Technologies and Environments	Apex, PHP, MySQL, Suitescript Salesforce, NetSuite, Amazon
Description	Synchronizing records i.e create, update, delete between Salesforce and Netsuite. We have to configure the mapping of objects (Salesforce) to record types (Netsuite) in Ec2 and it includes scripting in both accounts which trigger the record creation and managing the sync between them.

Project	**Gmail Integration**
Role	Developer
Technologies and Environments	Apex, PHP, MySQL, Gmail Gadgets, Suite script Gmail, Salesforce, NetSuite, Amazon
Description	This Integration includes saving the mails sent from Google to Salesforce and Netsuite. Configuration screen for setting up the connection between Gmail and salesforce, Netsuite. Interface injected into Gmail through Gadgets to fetch the contacts from the systems and synchronizing them.

Project	**Calendar Integration**
Role	Developer
Technologies and Environments	Chrome Extension, Apex, PHP, MySQL, Suite script Google calendar, Salesforce, NetSuite, Amazon
Description	This Integration includes saving the calendar invitations sent from Google calendar to Salesforce and Netsuite. A Google chrome Extension developed to synchronize the sent invitations to configured systems through Amazon app. Configuration screen for setting up the connection between Calendar and salesforce, Netsuite.

Project	**Google Maps integration**
Role	Developer
Technologies and Environments	Google maps API, Visualforce, Apex, JQuery Salesforce, NetSuite
Description	Locating the ten nearest customers (customer records) from where we are trying to access the page. Using Haversine formula, we locate our present location with marker and then fetch the nearest customers in map and on clicking the markers, the information with fields are displayed.

Project	**SkyDoc**
Role	Developer
Technologies and Environments	Suitescript, webservices, HTML, Jquery
	Google URL shortener, Amazon S3, NetSuite
Description	(http://suiteapp.com/SkyDoc)
	SkyDoc
	This app is used to upload and access large files from within Netsuite. Files are stored in Amazon S3 (Cloud storage platform) and can be accessed securely from anywhere and on any device.

Project	**Account Implementation Application**
Role	Developer
Technologies	Visualforce, Apex, Jquery, Salesforce.
Description	This Healthcare project includes from the account creation from Data.com to sending proposal request forms, confirming benefit request forms with the products (Pre sales) and selling the opportunity and starting implementation, adding extra benefits if required (Post sales) and transferring everything into external system after Post sales.

Project	**UtilityTool**
Role	Developer
Technologies and Environments	Java
	NetSuite, Amazon S3
Description	A Java tool which is used to upload more number and large files to Amazon S3 using a folder structure from System. It creates a success and failure log after all files are uploaded.

ROLES & RESPONSIBILITIES:

- Developing the code as per the requirements.
- Coordinate with the team and make them understand.
- Integrations with External systems.
